MAJOR PROBLEMS IN
CLINICAL SURGERY

Shah's Surgeons Unblock Bile Duct And Also Remove His Gallbladder

By LAWRENCE K. ALTMAN

Mohammed Riza Pahlevi, the deposed Shah of Iran, underwent a two-and-a-half-hour operation yesterday to remove several small gallstones that had blocked a bile duct and caused him to turn yellow from jaundice. Surgeons at the New York Hospital-Cornell Medical Center also removed his gallbladder because it contained several additional gallstones.

At the same time, a team of surgeons headed by Dr. Bjorn Thorbjarnarson, a general surgeon at the medical center, removed an enlarged lymph node from an unspecified site and took a small piece of the Shah's liver for tests to determine if cancer cells or other abnormalities were present.

As the Shah lay in his room on the 17th floor of the hospital at 525 East 68th Street, more than 200 shouting anti-Shah demonstrators in the streets below protested against his presence, shouting: "Death to the Shah!" [Page B14.]

Cancer Found 6 Years Ago

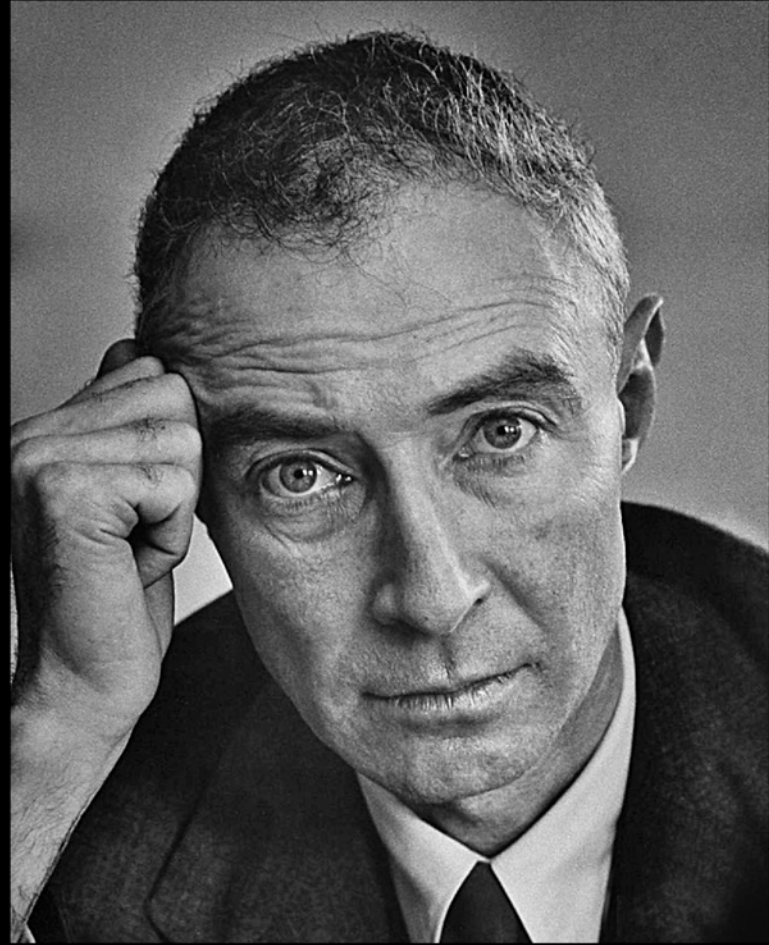

The surgery was done for reasons unrelated to a form of cancer that was first diagnosed in the Shah six years ago and for which he has been taking drugs under

Bréf til framtíðarinnar

Ok er fyrsti nafnkunnur jökullinn til að missa titil sinn.
Á næstu 200 árum er talið að allir jöklar landsins fari sömu leið.
Þetta minnismerki er til vitnis um að við vitum
hvað er að gerast og hvað þarf að gera.
Aðeins þú veist hvort við gerðum eitthvað.

A letter to the future

Ok is the first Icelandic glacier to lose its status as a glacier.
In the next 200 years all our glaciers are expected to follow the same path.
This monument is to acknowledge the changes in the snow
what is happening and what we need to do.
Only you know if we do anything.
