

Nature, People and Climate

Lorie Rufo

Climate Investment Funds

January 28, 2023

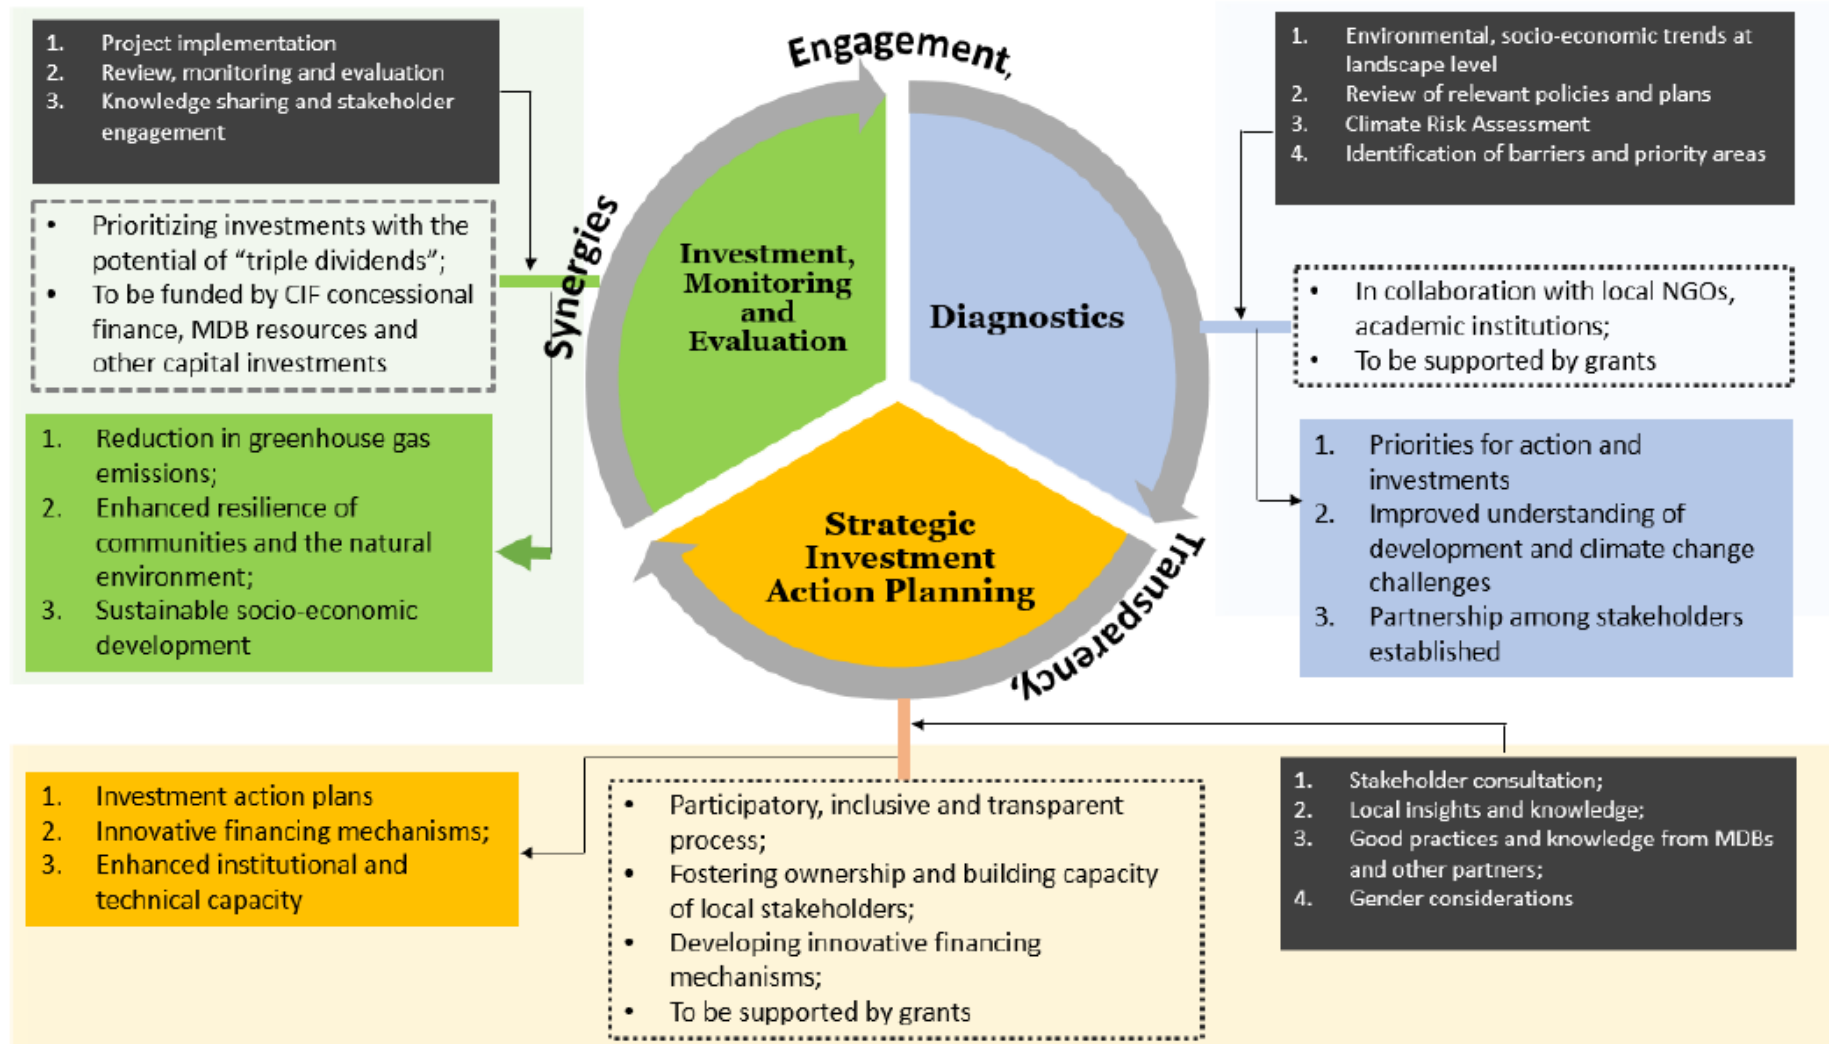

Why are Nature-based solutions needed?

- More than half of the world's GDP is dependent on nature*
- By 2030, nature based solutions can deliver emission reductions and removals of at least 5 GtCO₂e per year
- Productive and sustainable use of the earth's natural resources is essential to the health, food security, nutrition, and economic well-being of people all over the planet.
- Nature-based solutions can generate multiple benefits and should be planned, designed and implemented to deliver:
 - GHG emissions reductions
 - Climate change adaptation & resilience strengthening
 - Livelihood development
 - Improved health and well-being
 - Biodiversity conservation
- But ... to meet climate change, biodiversity and land degradation targets already set, **investment in NbS ought to triple** in real terms by 2030 and increase four-fold by 2050*

Nature, People and Climate Integrated Landscape Management for Multiple Benefits

Programmatic Approach & Phases to Developing NBS- Solutions

NPC Participating Countries

- Dominican Republic, Kenya, Egypt, Fiji, and Africa's Zambezi River basin region, which will be led by Zambia and includes Malawi, Mozambique, Namibia, and Tanzania.
- Brazil, Rwanda, Ethiopia, Zambia, Namibia
