

PS 2.6

MOBILIZING FINANCIAL RESOURCES FOR CLIMATE AND HEALTH

| BACKGROUND

This event will focus on a financing approach to mobilizing resources for climate and health

The impacts of climate change on health are significant and growing. At the same time the health sector is a non-trivial contributor to national greenhouse gas emissions. More resources clearly need to be secured to tackle these climate-related health risks and to decouple the climate impact of delivering healthcare. Resources are needed from both the adaptation and mitigation perspectives. There are already interventions and policies that can be integrated into health programming and scaled to realize the co-benefits when the right financing conditions are put in place. This event will focus on two topical examples, one with more of a mitigation focus energy and health – and its role in sustainable cooling and solarization, and one with an adaptation and resilience focus – Pandemic Prevention Preparedness and Response.

| OBJECTIVES

- Describe financing (including climate financing) opportunities to enable action at the intersection of climate and health
- Discuss examples of where implementation on the ground has been facilitated by availability of sufficiently **timely** and **substantial** financing

Panelist / Speaker

Toomas Palu

Adviser in Global Health

The World Bank
Switzerland

Toomas Palu, MD, MPA, is the Adviser on Global Health Coordination in the World Bank office in Geneva. Before moving to Geneva Toomas served as the Global Practice Manager for the World Bank's US\$1.3B health portfolio of the East Asia and Pacific Region and a team of 43 health and development professionals. Toomas is a member of the World Bank Health, Nutrition and Population Global Practice leadership team. In his prior engagements, he led World Bank health programs in several countries in Eastern Europe and Former Soviet Union, served as a Director in the Estonia Social Health Insurance Fund Management Board and as a Deputy Director of the Tallinn Emergency Care Hospital in Estonia. His work has focused on health reforms and health systems strengthening in low and middle-income countries, sustainable transition of externally financed health programs, financing pandemic preparedness among others. Toomas has a cum laude Medical Doctor degree from the Tartu University in Estonia and a Master of Public Administration degree from the Harvard University in the US. He has also studied public policy and medical sociology in the Oxford University and health economics in the University of York in the UK.
